Barn Office: Measurement Checklist

Measure from the face of the wood wainscot. Write feet and inches (e.g. 16' 4"). A and F matter most.

Plan, looking down

Side view at the door wall

#	What to measure	How	Measurement
A	**Corner to door track** (most important)	Along the floor at the wall base, to the near edge of the steel track or bracket, not the door panel.	
B	Door opening width	Side to side, jamb to jamb.	
C	Corner to black curtain	Along the sink wall, or to the first thing you won't move.	
D	Steel columns	Corner to the center of each column, on both walls. List each one.	
E	Door track depth	How far the overhead tracks run back from the door wall (measure on the floor under the track).	
F	**Floor to bottom of fan box** (most important)	Floor straight up to the underside of the wood frame around the fan.	
G	Floor to open door	Open the door fully; floor to the lowest panel, track or opener part.	
H	Floor to lowest beam	Floor to the lowest steel girt or beam over the corner.	
I	Sink drain location	Corner to the drain, and where it leaves the wall or floor.	
J	Electrical panel	Where it is, and roughly how many empty breaker spaces.	

Also helpful: Tape the outline of the room you want on the floor and take 2 photos with the tape measure visible.
